COAST - Collaborative Actions for Sustainable Tourism - Project

ANNEX B1: CAMEROUN - NATIONAL DEMONSTRATIONS FOR TESTING BEST AVAILABLE PRACTICES AND BEST AVAILABLE TECHNOLOGIES FOR SUSTAINABLE <u>TOURISM</u>

Demonstration project focus – To promote improved conservation, management and monitoring of coastal biodiversity, and to enhance and diversify local livelihoods through eco-tourism as a means of alleviating poverty.

Process used to reach revised Demonstration project document, logical framework and work plan:

At the end of the planning phase for the COAST project (mid 2006) each partner country had produced (with consultant support) a narrative project document describing in general terms the proposed demonstration project(s). There was no logical framework, no work plan, and only a total budget figure (see below) to guide stakeholders in beginning to implement the project. From January 2009 through to June 2009, based upon a one week visit by the Technical Coordinator to each partner country (during the Inception period of the COAST project) a revised narrative, new logical framework, first year work plan and indicative GEF support budget were developed and discussed. Subsequent to each country visit further support has been provided through email discussions. The demonstration project document now provides a more concise definition of the activities and outputs which are expected to be undertaken at the three sub sites in the Cameroun demonstration project. This short note highlights what are foreseen to be the main challenges in now starting to implement the work. This paper has been written as a subsidiary contribution to the general overview provided in the Inception Report.

The main issues which are outstanding are highlighted as follows:

a) Cost of Project and resourcing of specific activities:

The figures provided in the project documentation from the planning phase (PDF-B) indicate a high level of government/partner co-financing (the figures given were: **Total Cost**: US\$720,450; **GEF**: 230,450; **Co-funding**: \$490,000)

Given the long delay between the planning phase of the project and now its implementation, these commitments will need to be reviewed and revised by all the concerned parties. In particular for the current government of Cameroun budget cycle (Jan 2009/ Dec 2009) and for next year (Jan 2010/ Dec 2010) it will be important to estimate what co-financing funds or resources will be made available to support the activities identified in the first year work plan. Currently the draft work plan extends only to June 2010, so by November 2009 this will need to be reviewed and extended up to Dec 2010.

Within the work plan and for each separate major task or activity, we now need to establish a budget estimate for undertaking each activity. This exercise will need to be carried out by the focal point persons, demo project coordinators and other relevant partners for each activity based upon the local needs. A generic GEF budget allocation broken down by UNEP financial expenditure headings has already been provided to Cameroun to assist in this process.¹

^{• &}lt;sup>1</sup> For example for Cameroun the following GEF budget allocations to cover the complete demo project period (3-4yrs) have been given as a guideline: Consultants and personnel inputs approx \$122k

COAST - Collaborative Actions for Sustainable Tourism - Project

Following the approach used by the GEF supported WIO-Lab project, we are proposing that the COAST project adopts a similar mechanisms for estimating partner country contributions to the project where government in-kind contributions are made (obviously in addition to any cash contributions)².

b) Implementation arrangements for the demonstration project:

The Cameroun government works through a district structure (district and local authority) and so the proposed implementation mechanism is depicted to mirror this in Figure 1. The introduction of a post of Demo Project Coordinator, will ensure smooth flow of reporting and communication during the demonstration period between all three sub sites and also up to National level. This position will be funded by GEF funds (up to a maximum of \$500/mn). The Demo project coordinator would report to both national focal points (who will provide oversight on both environmental and tourism sector matters). A TOR for this position has been drafted and is attached at the end of this note. A small budget is available from GEF funds for the purchase of a motorbike, computer, printer and communication costs for this position (refer to the Inception Report revised budget – budget line 4201).

At the level of the executing agency (Min of Environment and Nature Protection), there will need to be a Letter of Agreement or MOU drawn up between UNIDO and the MINEP which clearly states the responsibilities of each contracting party. Again there are examples from the WIO-Lab project which may be usefully drawn upon to design such an agreement. Funds will then be disbursed via the UNIDO Yaounde office based upon the activities prioritised in each year's work plan. Funds spent will require to be fully receipted before a replacement tranche is received probably on a quarterly basis.

c) Identification and gaining the commitment of On-the-ground Partners:

Further work will be required at each of the demo project sub sites to obtain the commitment of partners and stakeholders during the first year of the demonstration project. This has been reflected in the work plan, and should be considered a priority networking activity for the Demonstration Project Coordinator as soon as he/she is in post. It will be especially important for the government designated Environment and Tourism officers at site level to be active in supporting and promoting such engagement as well as Kribi local authority.

d) Establishing a baseline and Monitoring and Evaluation Framework for each site:

The current demo project document provides some suggested indicators for developing this framework, but work still remains to:

- In-country travel approx \$12k
- Demo site activities approx \$77k
- Demo site equipment approx \$0k
- Cross-country training and meetings approx \$115k
- Monitoring and evaluation approx \$15k
- Reports, awareness and publications approx \$30k

² For more details on this please see attached documentation from WIO-Lab (Tracking government co-financing).

COAST - Collaborative Actions for Sustainable Tourism - Project

- > Agree which data are to be specifically collected and with what regularity
- > Agree who is to be responsible for what, within the M&E framework
- Establish key monitoring events each year in order to build up a picture of change during the demo project period and to report on these.

The first year's work plan has highlighted these needs under items 5 and 7.

e) Translation of documents and report outputs into English/French

It is essential that funds and time be allocated for this purpose throughout the demo project period. Awareness raising posters, brochures and where appropriate radio items will also need to be made accessible to local populations who may speak other local languages.

Annex B1: Cameroon Work Plan for year	• 1 $(1^{\text{st}} \text{ July } 2009 - 31^{\text{st}})$	Dec 2009): To be reviewed in Nov 09 a	nd extended up to Dec 2010.
